Changes to the Rent Stabilized Housing Stock in New York City in 2007

What's New

- ✓ The study finds a net estimated loss of 5,088 rent stabilized units in 2007, 16% fewer units lost than in 2006.
- ✓ The vast majority of additions to the rent stabilized stock in 2007 were in three categories: 421-a units, 420-c units and rental units leaving Mitchell-Lama.
- ✓ In 2007, high rent/vacancy decontrol makes up the largest category of subtractions from the stabilized stock, accounting for 73% of the subtractions.

Introduction

Rent regulation has been a fixture in New York City's housing market for 65 years, although the laws that govern rent regulated housing have been substantially changed and/or modified over time. In addition to legislative changes, the existing laws allow for dynamic changes in the regulatory status of a significant portion of the rent regulated housing stock in any given year. Units enter, exit or change status within the regulatory system.

The figures in this study represent additions and subtractions of dwelling units to and from the rent regulation system in 2007. These statistics are gathered from various city and state agencies.

This report is an update of previous studies done annually since 2003, when an analysis was done of the changes in New York City's rent stabilized housing stock from 1994 to 2002. The total number of additions and subtractions to the rent stabilized housing stock since 1994 is contained in the appendices of this report. These totals do not represent every unit that has been added or subtracted from the rent stabilized stock since 1994, but rather those that have been recorded or registered by various city and state agencies. They represent a 'floor,' or minimum count, of the actual number of newly regulated and deregulated units in these years.

Additions to the Rent Regulated Housing Stock

Since newly constructed or substantially rehabilitated units are exempt from rent regulation, increases to the regulated housing stock are frequently a result of owners "voluntarily" placing these new units under rent stabilization in exchange for tax benefits. These owners choose to place units under rent stabilization because of cost/benefit analyses concluding that short-term regulation with tax benefits is more profitable than free market rents without tax benefits. Events that lead to the addition of stabilized units include:

- 1 Section 421-a Program
- 1 J-51 Program
- 1 Mitchell-Lama buyouts
- 1 Lofts converted to rent stabilized units
- 1 Other Additions
- 1 Rent controlled apartments converting to rent stabilization

Section 421-a and J-51 Programs

The New York City Department of Housing Preservation and Development (HPD) administers programs to increase the supply of rental housing. Two of these programs have a significant impact on the inventory of stabilized

housing: the Section 421-a Program and the J-51 Program. Under Section 421-a of the Real Property Tax Law, newly constructed dwellings in New York City can elect to receive real estate tax exemptions. For the duration of the benefits, at least, the newly built apartments are subject to rent stabilization. In 2007, an estimated total of 2,838 units were added to the rent stabilized stock through the 421-a program, a quarter more than the number of additions seen in 2006 (2,264). In 2007, the largest number of units were in Brooklyn (809), followed by Queens (708), the Bronx (677), Manhattan (638), and the remaining six units were on Staten Island.

The J-51 Program provides real estate tax exemptions and abatements to existing residential buildings which are renovated or rehabilitated. This program also provides these benefits to residential buildings converted from commercial structures. In consideration of receiving these benefits, owners of these buildings agree to place under rent stabilization those apartments which otherwise would not be subject to regulation. The apartments remain stabilized, at least, until the benefits expire. The J-51 program added 135 units to the rent stabilized stock in 2007 (in two buildings in Brooklyn), about the same number that were added in 2006. (See Appendix 1)

Mitchell-Lama Buyouts

Where rents in a building are regulated directly by the Federal, State or City government, these apartments are exempt from rent stabilization and control laws. However, when these government-aided developments are no longer directly administered by a governmental entity, they may become subject to the rent stabilization laws. These federally regulated projects include Section 236 financed buildings and project-based Section 8 buildings.

Mitchell-Lama developments were constructed under the provisions of Article 2 of the Private Housing Finance Law (PHFL). This program was primarily designed to increase the supply of housing affordable to middle-income households. Approximately 75,000 rental apartments and 50,000 cooperative units were constructed under the program from the 1950's through the 1970's. For these units to be affordable,

the State or City provided low interest mortgages and real estate tax abatements, and the owners agreed to limit their return on equity.

While the State and City mortgages are generally for a term of 40 or 50 years, the PHFL allows owners to "buy-out" of the program after 20 years. If an owner of a rental development buys-out of the program and the development was occupied prior to January 1, 1974, the apartments may become subject to rent stabilization.

A total of 2,517 units in five formerly Mitchell-Lama rental developments became rent stabilized in 2007, the second highest total since we began collecting this data (the highest was in the prior year, when there were 3,040 units). Since 1994, 9,781 rental units have left the Mitchell-Lama system and become a part of the rent stabilized housing stock. (See Appendix 1)

Loft Units

The New York City Loft Board, under Article 7-C of the Multiple Dwelling Law, regulates rents in buildings originally intended as commercial loft space that have been converted to residential housing. When the units are brought up to code standard, they become stabilized. A total of 35 loft units entered the rent stabilization system in 2007, a 57% decrease from the 81 loft units added in 2006. (See Appendix 1)

Other Additions to the Stabilized Housing Stock

Additionally, several other events can increase the rent stabilized housing stock: tax incentive programs such as 421-g and 420-c, "deconversion," returned losses, and the sub-division of large units into two or more smaller units. At least 2,999 units were added to the rent stabilized stock from these programs in 2007. (See Appendix 1)

The 421-g tax incentive program is designed for conversion of units in Lower Manhattan from non-residential to residential use. The 421-g program added 441 rent stabilized units to the housing stock in 2007, up from just five in 2006. An additional 379 units were converted to residential rental use during the year, however their initial rent levels exceeded \$2,000 per

month and these units were subject to High Rent/Vacancy decontrol upon occupancy.¹

The 420-c program, a tax exemption program for low income housing projects that are developed in conjunction with the Low Income Housing Tax Credit program, also adds units to the rent stabilized stock. An estimated 2,558 units were added to the rent stabilized stock in 2007 through the 420-c program, a 42% increase over the number added in 2006. Of the total 420-c units that were added, the majority (1,457) were located in Manhattan, followed by Brooklyn (468), the Bronx (449) and Queens (184). There were no projects built on Staten Island.²

Deconversion occurs when a building converted to cooperative status reverts to rental status because of financial difficulties. Returned losses include abandoned buildings that are returned to habitable status without being substantially rehabilitated, or City-owned *in rem* buildings being returned to private ownership. These latter events do not generally add a significant number of units to the rent stabilized stock and were not quantified in this study.

Changes in Regulatory Status

Chapter 371 of the Laws of 1971 provided for the decontrol of rent controlled units that were voluntarily vacated on or after July 1, 1971. Since the enactment of vacancy decontrol, the number of rent controlled units has fallen from over one million to roughly 43,000.³ When a rent controlled unit is vacated it either becomes rent stabilized or leaves the regulatory system. If the vacated unit is in a rental building with six or more units and the incoming tenant pays less than \$2,000 per month, the apartment becomes stabilized. This process results in a diminution of the controlled stock and an increase in the stabilized stock.

According to rent registration filings with the NYS Division of Housing and Community Renewal (DHCR), in 2007 592 units were decontrolled and became rent stabilized, of which almost half (278) were in Manhattan. Of the remaining rent controlled units that became stabilized, 160 were located in Brooklyn, 92 were in Queens, 60 were in the Bronx and two were on Staten Island. (See Appendix 2)

Subtractions from the Rent Regulated Housing Stock

Deregulation of rent controlled and stabilized units occur because of statutory requirements or because of physical changes to the residential dwellings. Events that lead to the removal of stabilized units include the following:

- 1 **High Rent/High Income Decontrol**
- 1 **High Rent/Vacancy Decontrol**
- 1 **Cooperative/Condominium Conversions**
- 1 **Expiration of 421-a Benefits**
- 1 **Expiration of J-51 Benefits**
- 1 **Substantial Rehabilitation**
- 1 **Conversion to Commercial or Professional Status**
- 1 **Other Losses to the Housing Stock – Demolitions, Condemnations, Mergers, etc.**

High Rent/High Income Decontrol

The Rent Regulation Reform Act (RRRA) of 1993 permitted the deregulation of occupied apartments renting for \$2,000 or more in which the tenants in occupancy had a combined household income in excess of \$250,000 in each of the immediately two preceding years. The 1997 RRRA reduced the income threshold to \$175,000. Deregulation would occur upon application by the owner and upon the expiration of the rent stabilized lease. This income-based decontrol process, which is administered by the DHCR, relies upon data furnished to the NYS Department of Taxation and Finance as part of the verification process. Please note that both the rent level and household income criteria have to be met for decontrol to take place. If households earning at least \$175,000 paid less than \$2,000 per month, rent regulation would remain in effect. Also note that the owner must apply to DHCR in order to decontrol the unit. If the owner did not submit a decontrol application, the occupying tenant would remain regulated regardless of rent level and household income. Because DHCR has to approve the orders of deregulation, an exact accounting exists of units leaving regulation as a result of High Rent/High Income decontrol.

Based on DHCR processing records, High Rent/High Income decontrol affected a total of 309 apartments in 2007, 3% higher than the number of

High Rent/High Income Decontrol, 1994-2007

Number of Units Deregulated due to High Rent/Income Increases in 2007

Source: NYS Division of Housing and Community Renewal annual registration data.

units deregulated in 2006.⁴ Since 1994, 4,223 units have been deregulated due to High Rent/High Income decontrol, of which 94% have been located in Manhattan. (See graph above and Appendix 3) Since 2003, 83% of units have been located in Manhattan.

High Rent/Vacancy Decontrol

In the 1993 RRRA, the New York State legislature reinstated High Rent/Vacancy decontrol.⁵ This initial statute has since been changed several times. First, the 1993 RRRA decontrolled vacant apartments and occupied regulated apartments that subsequently were vacated, that rented for \$2,000 or more per month between July 7 and October 1, 1993. Second, the New York City Council allowed for the deregulation of apartments upon vacancy on or after April 1, 1994 if these units rented for \$2,000 or more. Thus, the original dates in the RRRA of 1993 establishing the parameters for decontrol were no longer applicable. DHCR interpreted the \$2,000 rent threshold as follows: if upon vacancy, the owner undertook individual

apartment improvements that increased the legal regulated rent to \$2,000 or more, and the incoming tenant agreed to pay \$2,000 or more, the unit would be deregulated.

In a third stage, in early 1997, the City Council amended the Rent Stabilization Law to only allow for vacancy deregulation of the apartment if the vacating tenant's legal regulated rent was \$2,000 or more. Finally, in June of 1997, with the passage of the RRRA, the state overrode the new City regulation. The determining factor was no longer the outgoing tenant's legal regulated rent but the incoming tenant's calculated legal regulated rent. Owners, upon a vacancy, could now apply a combination of allowable increases to reach the \$2,000 deregulation level: standard vacancy increases, special vacancy increases and individual apartment improvement increases. This calculated rent

High Rent/Vacancy Decontrol, 1994-2007

Continued Increase in Number of Units Deregulated due to High Rent/Vacancy

Note: Registration of deregulated units with DHCR was voluntary and not required from 1994-2000. These totals represent a 'floor' or minimum count of the actual number of deregulated units in these years. The NYC City Council required proof of registration with DHCR of the unit as exempt to be sent to the tenant beginning in March 2000 (see Endnote 6).

Source: NYS Division of Housing and Community Renewal annual registration data.

for a hypothetical incoming tenant was the determining factor, not the rent the incoming tenant actually paid. In fact, after a stabilized unit is deregulated by this calculation, the actual deregulated rent the new tenant pays can be less than \$2,000 per month.

According to DHCR rent registration records, 10,342 units were deregulated in 2007 under the High Rent/Vacancy decontrol provisions of the RRRRA, up 4% from 9,983 in 2006. From the period of 1994-2007, a total of 71,027 units were registered with the DHCR as being deregulated due to High Rent/Vacancy decontrol, 82% of which have been located in Manhattan. Since 2001, the first year owners were required to file high rent/vacancy decontrol registrations, the rate at which they have increased over the prior year has varied. From 2001 to 2002, high rent/vacancy registrations increased by 23%, and from 2002 to 2003, they increased by 34%. Since 2003, the rate of increase has been between 4-8% each year. (See graph on previous page and Appendix 4)

Cooperative & Condominium Conversions

When rent regulated housing is converted to ownership status, there is a small immediate decrease in the rental stock, but over time there is a significantly larger decrease. Tenants that choose to purchase their apartments after a cooperative or condominium plan is approved by the New York State Attorney General's Office are immediately removed from rent regulation. These units are no longer rentals. In eviction conversion plans, non-purchasing tenants may continue in residence until the expiration of their lease. In non-eviction plans (which are the overwhelming majority of approved plans) the regulated tenants have the right to remain in occupancy until they voluntarily leave their apartments. When a tenant leaves a regulated unit, the apartment in many cases becomes deregulated, regardless if the incoming tenant purchases or rents.⁷

In 2007, 1,455 units located in co-ops or condos left the stabilized housing stock, 7% fewer than left the system in 2006. A total of 40,412 co-op or condo units have left the stabilized stock since 1994. (See Appendix 5)

Expiration of Section 421-a and J-51 Benefits

As stated in the "Additions" section of this report, buildings receiving Section 421-a and J-51 benefits remain stabilized, at least until the benefits expire. Therefore, these units enter the stabilized system for a prescribed time period and then exit the system. The number of units leaving the stabilization system is directly dependent upon those units previously entering the system.

Expiration of 421-a and J-51 benefits has resulted in a total of 161 and 270 units removed, respectively, from the rent regulatory system in 2007. There were 39% fewer expirations of 421-a benefit but 14% more expirations of J-51 benefits in 2007 compared to expirations in the prior year. Since 1994, 17,307 421-a units have left the rent stabilization system while 13,702 J-51 units are no longer rent regulated. (See Appendix 5)

Substantial Rehabilitation

The Emergency Tenant Protection Act (ETPA) of 1974 exempts apartments from rent regulation in buildings that have been substantially rehabilitated on or after January 1, 1974. DHCR processes applications by owners seeking exemption from rent regulation based on the substantial rehabilitation of their properties. Owners must replace at least 75% of building-wide and apartment systems (i.e., plumbing, heating, electrical wiring, windows, floors, kitchens, bathrooms, etc.). In general, buildings that are substantially rehabilitated have been vacated and tended to have been stabilized properties. Therefore, when these buildings are substantially rehabilitated, the apartments are no longer subject to regulation and are considered new construction. This counts as a subtraction from the regulated stock. Notably, these properties do not receive J-51 tax incentives for rehabilitation.

During 2007, 297 units were removed from stabilization through substantial rehabilitation, down from 350 units lost in 2006. A total of 6,438 units have been removed from the rent stabilization system through substantial rehabilitation since 1994. (See Appendix 5)

Conversion to Commercial or Professional Status

Space converted from residential to nonresidential use is no longer subject to rent regulation. In 2007, 66 units were converted to nonresidential use, down from 135 in 2006. For the period 1994-2007, 1,978 residential units have been converted to nonresidential use. (See Appendix 5)

Other Losses to the Housing Stock

Owners may register units as permanently exempt when smaller units are merged into larger ones, or when the building is condemned, demolished or boarded-up/burnt-out. DHCR annual registration data shows that 1,304 units were removed from the stabilized housing stock in 2007 due to these reasons, 14% more than in 2006. (See Appendix 5)

Summary

Approximately 14,204 housing units left rent stabilization, while approximately 9,116 units initially entered the stabilization system in 2007. The built-in fluidity of the system resulted in a net loss of an estimated 5,088 units to the rent stabilized housing stock, a decrease of 16% from 2006, when rent stabilization saw a net estimated loss 6,022 units.⁸ (See Summary Table on next page.)

The vast majority of additions to the stabilized stock in 2007 were in three categories: 421-a units, equaling 31% of the total, 420-c units, equaling 28% of the total, and units that were formerly Mitchell-Lama, equaling another 28% of the total. Meanwhile, high rent/vacancy decontrol was the largest source of subtractions from the rent stabilized housing stock in 2007, accounting for 73% of the total number of subtractions. □

Endnotes

1. The 421-g tax incentive program provides 14-year tax exemption and abatement benefits for the conversion of commercial buildings to multiple dwellings in Downtown Manhattan. All rental units in the project become subject to rent stabilization for the duration of the benefits. These units are subject to High Rent/Vacancy decontrol if the initial rent level is \$2,000 or more. Also, an additional 971 condo units were created under this tax incentive program in 2007.
2. The 420-c tax incentive program provides a complete exemption from real estate taxes for the term of the regulatory agreement (up to 30 years). Eligible projects are owned or controlled by a not-for-profit Housing Development Fund Company, subject to an HPD regulatory agreement which requires use as low-income housing and are financed in part with a loan from the City or State in conjunction with federal low-income housing tax credits.
3. The 2005 Housing and Vacancy Survey reported a total of 43,317 rent controlled units in New York City.
4. The final count for petitions for High Rent/High Income decontrol may be slightly reduced as they are subject to appeal or in some cases, to review by a court of competent jurisdiction.
5. Decontrol of certain high rent apartments was instituted in New York City twice before, in 1964 and in 1968.
6. In March 2000, the City Council passed Local Law Intro No. 669-A, which amended the administrative code of the City of New York, in relation to extending the rent stabilization laws with certain amendments to such laws and the rent control law.
7. A court decision affecting units in Brooklyn and Queens ruled that apartments in buildings that have converted to co-op/condo status may remain rent stabilized for a new rental tenant even after a stabilized tenant vacates the apartment.
8. Almost the entire number of the estimated net loss of units to the rent stabilized housing stock will remain as housing units in New York City. These units would convert from rent stabilization to either forms of ownership or to non-regulated rental units unless they are demolished.

Summary Table of Additions and Subtractions to the Rent Stabilized Housing Stock in 2007

Program	Number of Units
ADDITIONS	
421-a	+ 2,838
J-51 conversions	+ 135
Mitchell-Lama buyouts	+ 2,517
Loft conversions	+ 35
Other Additions	+ 2,999
CHANGES	
Rent control to rent stabilization	+ 592
Subtotal Additions & Changes	+ 9,116
SUBTRACTIONS	
Co-op and Condo subtractions	- 1,455
High Rent/Vacancy Decontrol	- 10,342
High Rent/High Income Decontrol	- 309
421-a Expiration	- 161
J-51 Expiration	- 270
Substantial Rehabilitation	- 297
Commercial/Professional conversion	- 66
Other Subtractions	- 1,304
Subtotal Subtractions	- 14,204
NET TOTAL	
Net Estimated Loss	-5,088

2006	2,264	130	285	2,755	81	5	1,798	634	7,952
2007	2,838	135	2,227	290	35	441	2,558	592	9,116
Total	35,592	1,997	4,252	5,529	634	1,619	15,274	34,728	99,625

421-a Notes: Between 1994-2002, a count of 26,987 421-a units includes co-op and condo units that were created under the 421-a program. Analysis of the RPAD database shows that on average from 1994 to 2002, 25% of 421-a units were owner units and 75% were rental units. Therefore an estimated 20,240 units were added to the rent stabilized stock. In 2003, 51% of 421-a units were rental units, therefore, of the 3,782 units created under the 421-a program in 2003, 1,929 were rentals that are rent stabilized. In 2004, 72% of 421-a units were rental units, therefore, of the 6,862 units created under the 421-a program in 2004, 4,941 were rentals that are rent stabilized. In 2005, 67% of new 421-a units were rentals, 3,380 of a total of 5,062 units. In 2006, 58% of new 421-a units were rentals, 2,264 of a total of 3,875. In 2007, 67% of new 421-a units were rentals, 2,838 of a total of 4,212.

J-51 Notes: The numbers represent units that were not rent stabilized prior to entering the J-51 Program. Most units participating in the J-51 Program were rent stabilized prior to their J-51 status and therefore are not considered additions to the rent stabilized stock.

Loft Notes: Loft conversion counts are not available from 1994 to 1997.

421-g, 420-c and Rent Controlled Notes: Counts for each year between 1994 and 2002 are not available; only an aggregate is available.

Note: Registration of deregulated units with DHCR was voluntary and not required from 1994-2000. These totals represent a 'floor' or minimum count of the actual number of deregulated units in these years. The NYC City Council required proof of registration with DHCR of the unit as exempt to be sent to the tenant beginning in March 2000 (see Endnote 6).

2007	309	10,342	1,455	161	270	297	66	1,304	14,204
Total	4,223	71,027	40,412	17,307	13,702	6,438	1,978	18,266	173,353

Co-op/Condo Note: Subtractions from the stabilized stock in co-ops and condos are due to two factors: (1) stabilized tenants vacating rental units in previously converted buildings and (2) new conversions of stabilized rental units to ownership.

High Rent/Vacancy Decontrol Note: See Appendix 4 note.
